

Protecting your interest

Transoil delivers a comprehensive range of customized marine expediting services which can be tailored to meet your requirements, whatever the nature of your business and wherever you operate.

Cargo expeditors play a vital role in international trade and shipping. Since starting our super-intendent services, our clients did report significant reduction of losses, diversion of cargo to bunker was prevented (in the case of petroleum cargoes), mismeasurement (deliberate or otherwise) was avoided both ashore and onboard and several attempts of cargo theft were thwarted.

Solid reputation

Over the years Transoil built a solid reputation in loss control, based on a team of qualified professionals consisting of master mariners, chemists, ex-terminal operators and experienced superintendents. We have handled cargoes like petroleum products, chemicals and fertilisers for producers and traders from Germany, Italy, The Netherlands, Switzerland, United Kingdom and Russia.

Transoil can be appointed to supervise and oversee cargo operations at load or discharge ports to ensure a smooth process. Our experienced staff will attend your vessel prior to loading or discharging operation and note delays and operational procedures, followed by daily and final reports.

They ensure adherence of ASTM and API standards by the appointed independent inspection company, calculates cargo quantities, compares and analyses ship/shore cargo transferred quantities.

During this process our office maintains close contact with the client by phone and email. Immediately upon completion of operations, the client will receive a complete time-log and a summary with cargo reconciliation and confirmed shore out-turn by email. A full report follows within a week.

Exclusive attendance

We ensure prompt arrival at each assignment in sufficient time to undertake all necessary terminal investigation and similarly conducting thorough completion observations. Additionally superintendents remain in exclusive attendance throughout the entire loading or discharge operation. Attending other vessels is not permitted, thus ensuring complete and uninterrupted control and supervision and total protection of clients' interests. The comprehensive nature of the superintendents duties include exhaustive survey procedures as an integral function. Close attention is paid to sea valves, pumping procedures and, of course, bunkers in the case of tanker operations.

Our superintendent services include:

- 100% attendance during load, discharge or STS operation
- 'Squeeze dry' discharge operations, effective C.O.W. plan and monitoring, particularly of heated or waxy natured cargoes
- Multi point ROB/OBQ assessment
- Specialized closed sampling techniques available
- Real time communication with clients
- Protection and principal's commercial awareness / interest
- Analytical witnessing
- Minimizing demurrage costs
- Cargo blending, both onboard and in terminal
- Oversight of cargo document accuracy
- Detailed and unbiased report of events
- Loss investigation

Our expeditors

With a skilled team of specialists Transoil is a reliable partner to support your marine cargo operations at every stage. We can offer you an unparalleled level of marine technical expertise to support your operations. Each member of our marine technical services team has been selected through a rigorous process from our international network holding qualifications like Dangerous Cargo Endorsement and the International Federation of Inspection Agencies (IFIA). They are specifically chosen for their mix of ability, training and experience of loss reduction, with a minimum of five years experience with crude oil, chemicals, biofuels blending and additives.

About Transoil
